

AYDAN SƏMƏDOVA

FRONT END DEVELOPER

ABOUT

29.03.1997

Front-end is like a playground for adults which I love to dive in. Basically, we're building an interactive puzzle. First, we create functional pieces like core components using all the appropriate materials and tools from the numerous existing ones. Then we put them together to get the whole picture. After that, the user has a final functional and visual product.
